

HSU-100 Silicone Skins & 3rd Party Antenna Protectors

The Handset Skins have been designed to accommodate the popular Gizmo and Moodji Antenna Protectors. On the top of the Skin you will find a recessed seam demarcating the Protector Footprint. In the picture below, the seam is indicated by a dotted green line. This is the section of the Skin to be removed to fit your Protector.

Using a sharp pair of scissors carefully cut along the Skin's recessed seam. Make the first cut by pinching the corner of the Skin and snipping into the seam. Alternatively you can access the seam via the antenna hole. Once the Protector Footprint has been removed, slide the Handset with the affixed Protector into the Skin's Screen Window, insert the Protector through the Footprint opening and pull the Skin snugly around the unit.
